

A scatter plot showing 100 data points, each represented by a colored circle with a black outline and a lowercase letter label. The x-axis is labeled from 0 to 100 in increments of 20. The y-axis is unlabeled. Two vertical dashed lines are drawn at approximately x=15 and x=45. The data points are color-coded by label: 'b' (orange), 'c' (green), 'e' (purple), 'f' (brown), 'g' (pink), 'h' (grey), 'i' (olive), and 'j' (teal). The points are distributed across the plot, with a higher density of 'b' points on the left and 'g' points in the center-right. The 'i' points are clustered at the top right, and the 'j' point is at the bottom right.
